District IV

TRAFFIC SIGNAL WARRANT ANALYSIS

FOR

SR 5/US-1/NE 6th Avenue at NE 1st Street

Section No. 93010000, MP: 9.837

Prepared by
A&P Consulting Transportation Engineers

Engineer's Certification

I, **Elio R. Espino, P.E. No. 58341**, certify that I currently hold an active Professional Engineer's License in the State of Florida and I am competent through education and experience to provide engineering services in the civil and traffic engineering disciplines contained in this report. I further certify that this report was prepared by me or under my responsible charge as defined in Chapter 61G15-23.003 F.A.C. and that all statements, conclusions and recommendations made herein are true and correct to the best of my knowledge and ability.

Project: Traffic Signal Warrant Analysis for SR 5/US-1/NE 6th Avenue at NE 1st Street

(Section No. 93010000, M.P.: 9.837)

Location: Palm Beach County, Florida

10305 NW 41st Street, Suite 115

Doral, FL 33178

Certificate of Authorization No. EB-0007797

1. Introduction

A&P Consulting Transportation Engineers, Corporation (APCTE) has been retained by the Florida Department of Transportation (FDOT), District IV, to conduct a Signal Warrant Analysis at the intersection of SR 5/US-1/NE 6th Avenue and NE 1st Street (Section No. 93010000, MP= 9.837), located in Delray Beach, Palm Beach County. See **Figure 1.1** depicts the study location map.

The signal warrant analysis was initiated based on a request received by FDOT to evaluate the need for the potential installation of a traffic signal at this location following a fatal crash which occurred on September 21st, 2016. According to the request, the crash took place when a vehicle traveling northbound struck a vehicle traveling westbound as the latter was attempting to make a right turn. As such, a traffic signal was proposed to prevent these types of crashes at the study intersection.

The objective of this study is to perform a signal warrant analysis at the intersection of SR 5/US-1/NE 6th Avenue and NE 1st Street and provide recommendations if necessary.

This study includes a brief description of the existing conditions, an analysis of the three-year recorded crash data, collision diagrams, a site review, evaluation of the intersection sight distance, and perform a signal warrant analysis.

2. Existing Conditions

The intersection of SR 5/US-1/NE 6th Avenue and NE 1st Street is located within the City of Delray Beach in Palm Beach County, Florida. SR 5/US-1/NE 6th Avenue is a one-way urban minor arterial with two 11-foot lanes oriented in the northbound direction, and NE 1st Street is an undivided two-lane collector oriented in the east-west direction.

2.1. Geometry

Table 2.1 summarizes the existing lane configuration at the study intersection, and **Exhibit 2.1** provides images of the approaches to the intersection.

Table 2.1 – Existing Traffic Control and Lane Configuration at Intersection of SR 5/US-1/NE 6th Avenue and NE 1st Street

Traffic Control	Approach			
	Eastbound	Westbound	Northbound	Southbound
Two-Way Stop-Controlled	TL	TR	L, T, TR, BL	N/A

Notes: (1) SR 5/US-1/NE 6th Avenue is a one-way minor arterial

(2) TL = Through lane shared with left turn movements

(3) TR = Through lane with shared right turn movements

(4) L = Exclusive Left-Turn Lane

(5) T = Through Lane

(5) BL= Bicycle Lane

Figure 1.1 – Location Map

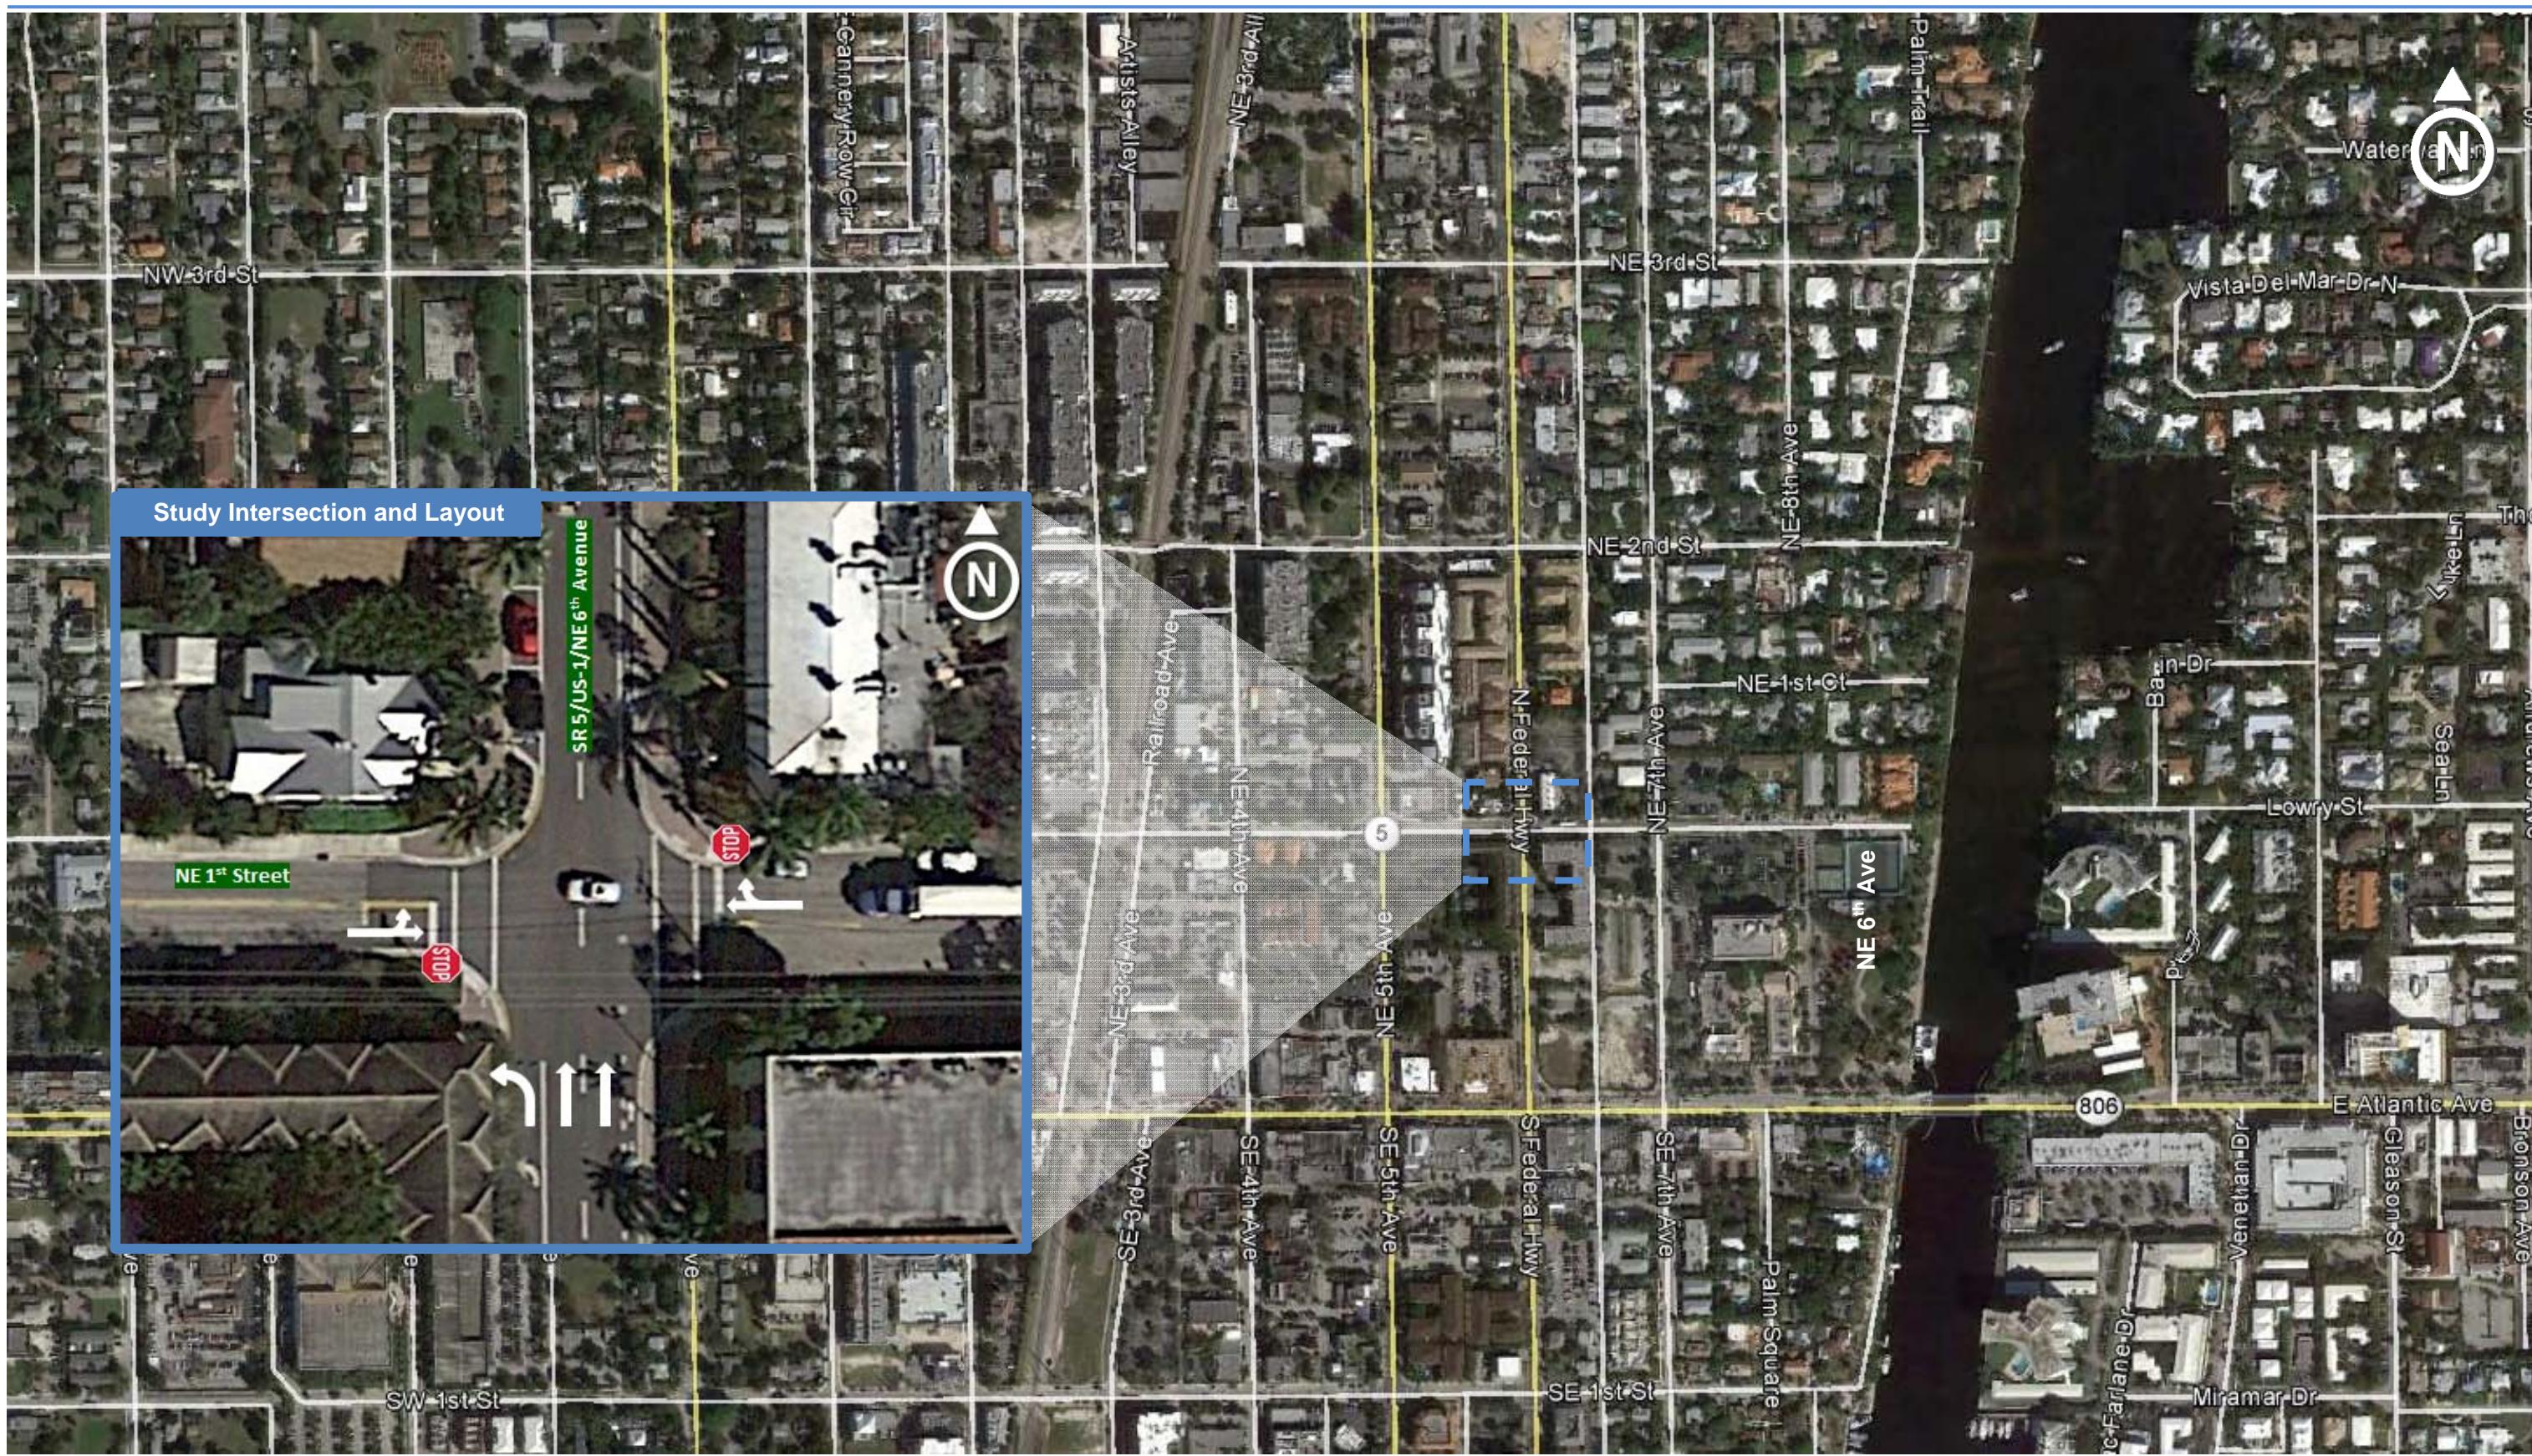

Exhibit 2.1 – Intersection Approaches

2.2. Posted Speed Limit

The posted speed limit on SR 5/US-1/NE 6th Avenue is 35 mph in the vicinity of NE 1st Street.

2.3. Land Use

The study intersection is located within the City of Delray Beach's Central Business District. The land use consists of a restaurant on the northeast quadrant, and residential on the northwest, and southwest and southeast quadrants of the study intersection.

2.4. Parking

On-street parking is provided on the west side of SR 5/US-1/NE 6th Avenue, north of NE 1st Street. In addition, on-street parking is provided on the south side of NE 1st street, west of SR 5/US-1/NE 6th Avenue, and on the north side of NE 1st Street, east of SR 5/US-1/NE 6th Avenue.

2.5. Transit

Palm Beach County's bus transit service; Palm Tran Route 1 (The Bolt) is currently serving SR 5/US-1/NE 6th Avenue. The Bolt Route 1 is a limited-stop service with 20-minute headways during the weekday peak hours. A bus stop is located approximately 280 feet north of the study intersection on the east side of SR 5/US-1/NE 6th Avenue.

2.6. Pedestrian Facilities

Sidewalks are provided on both sides of SR 5/US-1/NE 6th Avenue and on both sides of NE 1st Street. The sidewalks are approximately 11 feet wide on SR 5/US-1/NE 6th Avenue.

Crosswalks are provided on the east and west legs of the study intersection. Curb ramps are provided at the intersection.

2.7. Bicycle Features

A designated northbound bicycle lane is provided on the east side of SR 5/US-1/NE 6th Avenue.

2.8. Pavement Conditions and Pavement Markings

Based on the site reviews, the roadway is asphaltic pavement that is in good condition. Overall, pavement markings provided at the study intersection are in good condition since this section of 5/US-1/NE 6th Avenue was recently milled and resurfaced.

2.9. Landscaping

Landscaping is provided on both sides along SR 5/US-1/NE 6th Avenue. Montgomery Palms and Royal Palms are spaced at least 27 feet off-center. Additionally, shrubbery is also provided along the corridor. Landscaping plans are provided in **APPENDIX A**.

2.10. Traffic Control

The study intersection is unsignalized where the east and west legs are controlled by a Stop (R1-1) sign.

3. Crash Data Analysis

Available crash data for the last three-year period, from 2012 to 2014, were obtained from FDOT's Crash Analysis Reporting System (CARS). Crash summary tables and collision diagrams were prepared and detailed information is presented in **APPENDIX B**. A summary of the crash data analysis is presented in **Table 3.1**.

The following findings are obtained from the crash data analysis:

- A total of nine (9) crashes were recorded at the intersection during the three-year period.
- One (1) crash was recorded in 2012, two (2) crashes in 2013, and six (6) crashes in 2014.
- No fatalities were recorded during the three-year period.
- One (1) injury was recorded in 2012, none in 2013, and two (2) in 2014.
- Angle crashes were the predominant type of crashes at the study intersection, accounting for approximately 67% (6 crashes) followed by sideswipe crashes accounting for approximately 22% (2 crashes). There was one (1) collision with a parked vehicle which involved a motorist driving under the influence.
- Seven (7) crashes occurred during daytime and two (2) crashes occurred during nighttime conditions.
- Six (6) crashes occurred during dry conditions, while three (3) occurred during wet conditions, accounting for approximately 33%, which is higher than the statewide average of 30%. However, it should be noted that this percentage is high due to the low crash frequency.

Table 3.1 –Crash Data Summary from 2012 to 2014

4. Intersection Sight Distance Evaluation

A sight distance evaluation was performed at the study intersection to assess the sight distance triangle. The sight distance for the study intersection was calculated based on AASHTO's "A Policy on Geometric Design of Highways and Streets, 2011", Chapter 9, Intersection Sight Distance. The sight distance was calculated for cases B2 (right turns from the minor road) and B3 (crossing the major road). The sight distance was calculated for passenger cars by using the following equation:

$$ISD = 1.47 \times V_{major} \times t_g$$

where

ISD = Intersection sight distance (feet)

V_{major} = design speed on major roadway (mph)

t_g = time gap for minor road vehicle (seconds)

The design speed of SR 5/US 1/NE 6th Avenue is 35 mph based on a review of the typical section plans included in the landscaping plans included in **APPENDIX A**. The time gap utilized for case B2 was 6.5 seconds for passenger cars and the ISD was approximately 335 feet. The time gap utilized for case B3 was 7.5 seconds, which includes an adjustment of 0.5 seconds for each additional lane that a motorist has to cross, and the ISD was approximately 390 feet. Therefore, an ISD of 390 feet was utilized to conduct the sight distance evaluation. An exhibit that graphically depicts the sight distance triangle is included in **APPENDIX C**.

A field review was conducted on Tuesday, October 25th, 2016, to assess the sight distance at the study intersection. The point of observance was located 14.5 feet from the edge of travel lane along SR 5/US-1/NE 6th Avenue, as shown in **Exhibit 4.1**. The site review observations concluded that the sight distance for the design speed is satisfactory, as it was greater than the 390 feet required.

Exhibit 4.1 – Field-Measured Distance 14.5 feet from Edge of Travel Lane

Also, site review observations revealed that most of the motorists on westbound NE 1st Street stopped approximately 14.5 feet away from the edge of travel lane, as shown in **Exhibit 4.2**.

Exhibit 4.2 – Motorists' Point of Observance Located 14.5 feet from Edge of Travel Lane

5. Data Collection

Vehicle traffic counts, both mechanical 72-hour approach and manual eight-hour Turning Movement Counts (TMCs), were collected at the intersection of SR 5/US-1/NE 6th Avenue and NE 1st Street. Additionally, speed data was also collected for the study intersection.

5.1. 72-Hour Approach Counts

FDOT provided 72-hour mechanical traffic volume counts, which were collected for each approach from Thursday, October 13, 2016 to Sunday, October 16, 2016. Mechanical traffic counts raw data are presented in APPENDIX D. Figures 5.1 and 5.2 show the variation of hourly traffic volumes by time of day for the typical weekday (Thursday) and Saturday for each approach and the total of all approaches.

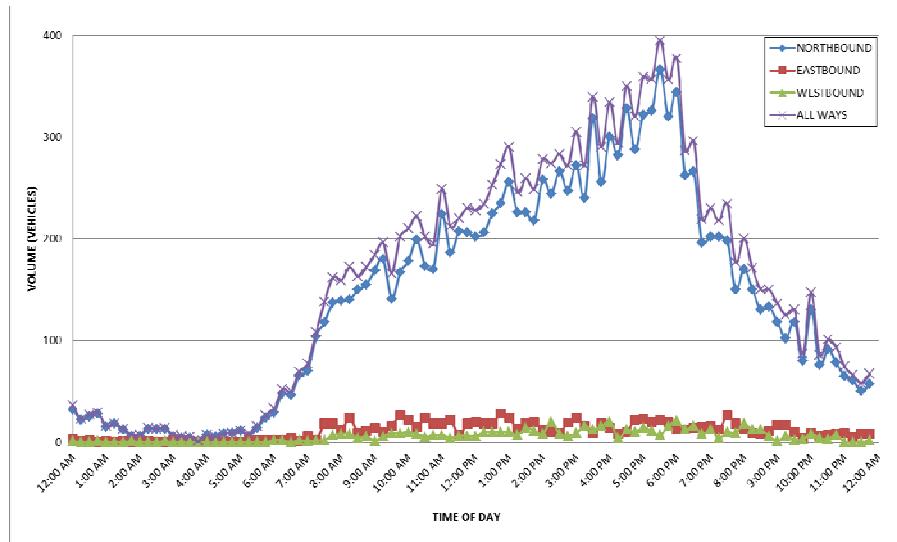

Figure 5.1 –Hourly Traffic Volumes by Time of Day, Thursday (10/13/2016)

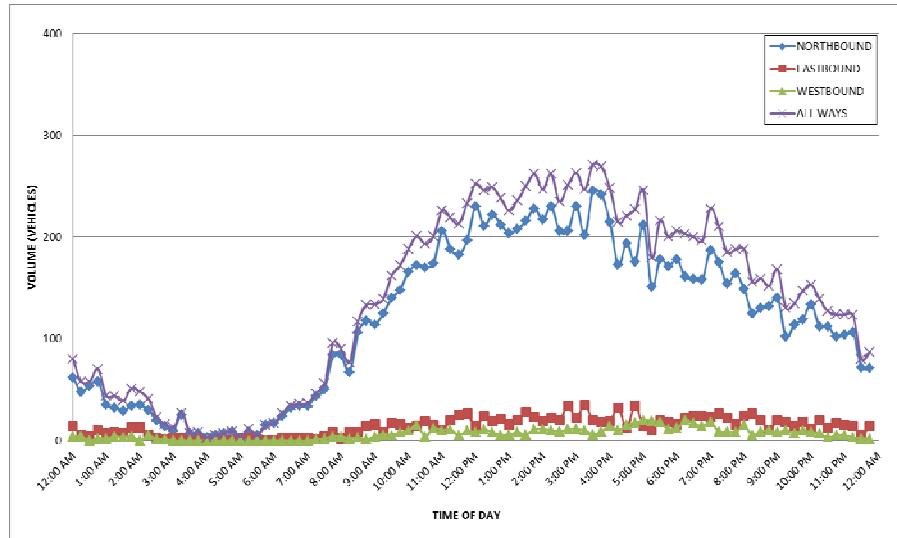

Figure 5.2 –Hourly Traffic Volumes by Time of Day, Saturday (10/16/2016)

5.2. Eight-Hour TMCs

FDOT provided eight-hour TMCs, which were conducted during the morning (6:30 AM to 9:30 AM), Midday (12:00 PM to 2:00 PM), and afternoon (4:00 PM to 7:00 PM) peak periods. These TMCs were collected on Tuesday, October 4th, 2016, Wednesday, October 5th, 2016, and Sunday, October 16th, 2016. The raw data is included in **APPENDIX E**, and the peak-hour TMCs are summarized in **Table 5.1**.

Analysis of the eight-hour TMCs indicated that the AM peak hour starts at 8:30 AM, the midday peak hour starts at 12:15 PM, and the PM peak hour starts at 4:00 PM, during a weekday. Moreover, the weekend peak hours begin at 8:30 AM for the AM peak period, 12:00 PM for the midday peak period, and 4:00 PM for the PM peak period.

Table 5.1 – Summary of Peak-Hour Traffic Volumes

Peak Hour	Westbound			Northbound			Eastbound		
	Left	Through	Right	Left	Through	Right	Left	Through	Right
Weekday (Tuesday)									
AM Peak (8:30 AM to 9:30 AM)	0	13	4	56	646	6	26	31	0
MD Peak (12:15 to 1:15 PM)	0	23	14	93	938	12	51	22	0
PM Peak (4:00 PM to 5:00 PM)	0	22	11	83	974	5	51	22	0
Weekend (Sunday)									
AM Peak (8:30 AM to 9:30 AM)	0	4	2	30	290	4	6	13	0
MD Peak (12:00 to 1:00 PM)	0	21	6	88	606	10	38	20	0
PM Peak (4:00 PM to 5:00 PM)	0	33	8	104	603	6	42	44	0

5.3. Speed Data Analysis

The FDOT provided speed data, which were collected on a Thursday (October 13th, 2016) and a Saturday (October 15th, 2016), for the northbound approach to the study intersection. **Table 5.2** summarizes the findings of the speed data analysis from the raw speed data that are included in **APPENDIX F**. The 85th percentile speed represents the speed at or below which 85% of the vehicles travel. The 10-mph pace represents the 10-mph range in which the highest percentage of vehicles are traveling.

Overall, **Figure 5.3** and **Figure 5.4** show that the average 85th percentile speed ranges from 25 mph to 36 mph. **Table 5.2** shows the upper limit of the predominant 10-mph pace was 33 mph for the study intersection. Additionally, **Table 5.2** shows that the 85th percentile speed is very similar to the posted speed limit of 35 mph during the different periods for both the weekday and weekend.

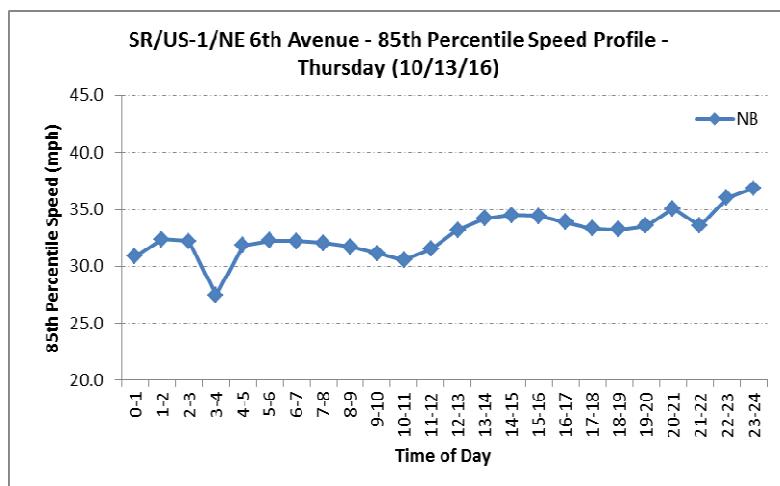

Figure 5.3 – 85th Percentile Speed Profile for Thursday, October 13th, 2016

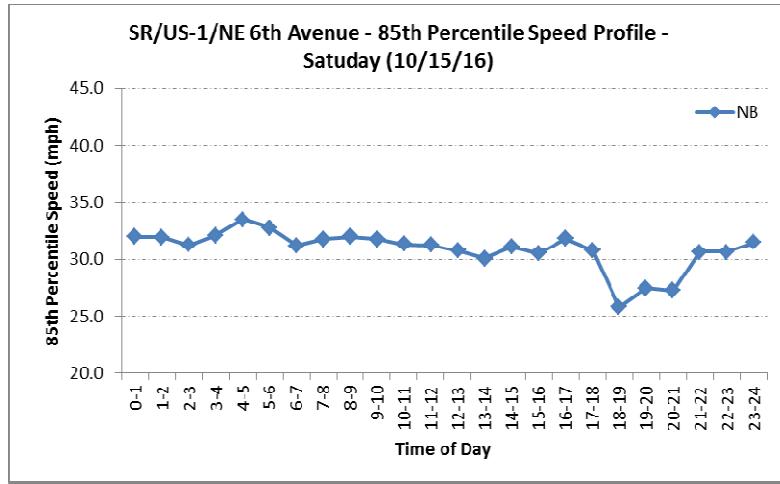

Figure 5.4 – 85th Percentile Speed Profile for Saturday, October 15th, 2016

Table 5.2 – Speed Data Summary

Time Period	SR5/US-1/NE 6 th Avenue and NE 1 st Street					
	50 th Percentile Speed (mph)	85 th Percentile Speed (mph)	10 mph Pace	50 th Percentile Speed (mph)	85 th Percentile Speed (mph)	10 mph Pace

20-21	30.1	35.1	23.0-33.0	22.4	27.3	18.0-28.0
21-22	28.7	33.6	23.0-33.0	24.9	30.7	18.0-28.0
22-23	29.4	36.0	23.0-33.0	25.8	30.7	23.0-33.0
Average	27.8	32.7		25.8	30.9	

The speed calculations can be found in **APPENDIX G**.

6. Site Review Observations

Traffic operations were observed at the intersection on Tuesday, October 25th, 2016, during the PM period (4:00 PM – 6:00 PM), and Wednesday, October 26th, 2016, during the AM period (7:30 AM – 9:30 AM). The following conditions were observed:

AM Peak (7:30 AM to 9:30 AM) Field Observations

- Very light traffic along all approaches, as shown on **Exhibit 6.1**.
- Maximum queuing along eastbound movement was two (2) vehicles.
- The upstream signal at Atlantic Avenue provided several adequately-sized gaps for crossing and turning maneuvers from NE 1st Street.
- Low pedestrian and bicycle activities were observed at the study intersection.

Exhibit 6.1 – Low volumes along both major and minor approaches during the AM Period

PM Peak (4:00 PM to 6:00 PM) Field Observations

- Moderate traffic was observed along northbound SR 5/US-1/NE 6th Avenue.
- Maximum queuing along eastbound movement was four (4) vehicles. The maximum queue at the westbound approach was two (2) vehicles.
- The upstream signal at Atlantic Avenue provided several adequately-sized gaps for crossing and turning maneuvers from NE 1st Street.
- Some pedestrian and bicycle activities were observed.

7. Signal Warrant Analysis Results

The traffic signal warrants study was performed using the Manual on Uniform Traffic Control Devices (MUTCD) 2009 edition methodology. The MUTCD Section 4C.01 mandates the following nine traffic warrants to be considered:

- Warrant 1: Eight-Hour vehicular volume
- Warrant 2: Four-Hour vehicular volume
- Warrant 3: Peak Hour
- Warrant 4: Pedestrian Volume
- Warrant 5: School Crossing
- Warrant 6: Coordinated System
- Warrant 7: Crash Experience
- Warrant 8: Roadway Network
- Warrant 9: Intersection near a Grade Crossing

Also, the MUTCD states, “the satisfaction of a traffic signal warrant shall not in itself require the installation of a traffic signal”. Traffic signal warrants were evaluated for the existing conditions and considering the guidance from the MUTCD.

The signal warrants were analyzed based on traffic volume data collected on a weekday and Saturday. The results of the weekday and weekend analyses are summarized in **Table 7.1**, and the signal warrant analysis worksheets are included in **APPENDIX H**.

Table 7.1 – Warrant Weekday and Weekend Summary

Warrant	Satisfied?	
	Thursday	Saturday
1 - Eight-Hour Vehicular Volume	No	No
2 - Four-Hour Vehicular Volume	No	No
3 - Peak-Hour	Not Applicable	Not Applicable
4 - Pedestrian Volume	No	No
5 - School Crossing	Not Applicable	Not Applicable
6 - Coordinated Signal System	Not Applicable	Not Applicable
7 - Crash Experience	No	No
8 - Roadway Network	Not Applicable	Not Applicable
9 - Intersection near Grade Crossing	Not Applicable	Not Applicable

Based on the findings from this traffic signal warrant study, installation **is not** recommended at this time.

8. Summary and Recommendations

The study included field reviews and analysis of traffic volume data, crash history, traffic warrant analysis and conclusions and recommendations. Based on the analysis of the traffic data and site observations, the following describes the findings from the study:

- Analysis of the 72-Hour counts indicated that the eastbound approach experiences higher volumes than those of the westbound approach.
- During both the AM and PM peak periods, the study intersection experienced low vehicular volume along the east and west approaches.
- The speed data show that motorists on SR 5/US-1/NE 6th Avenue in the vicinity of the intersection comply with the posted speed limit of 35 mph.
- The number and designation of lanes at the intersection are consistent with the posted speed limit of 35 mph.
- There were nine (9) crashes reported at the intersection during the 2012-2014 period. The crash types were: six (6) angle crashes, two (2) sideswipe crashes, and one (1) crash with a parked vehicle. The crash data analysis indicates a high frequency of crashes in 2014.
- Site observations indicated that the majority of motorists are stopping past the stop bar, approximately 14.5 feet behind the edge of travel lane.
- The sight distance evaluation indicates that motorists on westbound NE 1st Street approaching SR 5/US-1/NE 6th Avenue have adequate sight distance. However, an existing trash receptacle and a bench are located within the area that should be free of obstructions.
- Site observations indicate that the upstream signalized intersection provides gaps of adequate size to perform crossing or right-turning maneuvers.
- Signal Warrant Analyses were performed by utilizing traffic volumes collected on a weekday and on a Saturday. The Signal Warrant Analyses indicate that a traffic signal is not warranted at this time. The volumes on the side street are low (less than 90 vehicles per hour on the eastbound approach which had the highest volumes during the selected hours) and there is no crash pattern that could be corrected by the installation of a traffic signal. The intersection's current Stop sign control on NE 1st Street is appropriate.

The following recommendations are provided as an enhancement to the existing conditions:

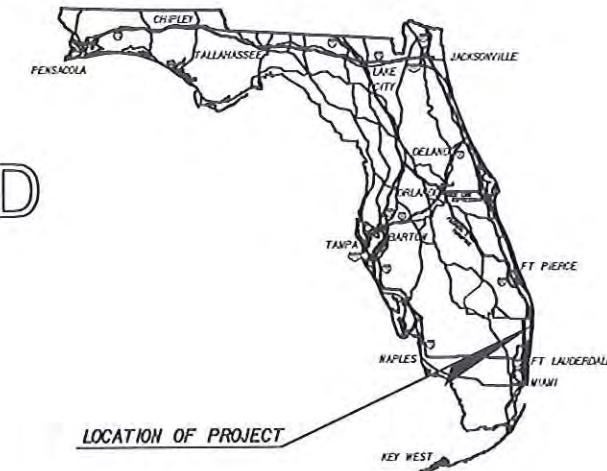

- Install a "Cross Road" (W2-1) sign on the east and west sides of SR 5/US-1/NE 6th Avenue, approximately 120 feet south of NE 1st Street.
- Replace the existing Stop (R1-1) signs on NE 1st Street with oversized signs (36 inches by 36 inches). In addition, supplement the proposed Stop (R1-1) signs with "Traffic From Left (Right) Does Not Stop" (W4-4aP) plaques.
- FDOT should coordinate the re-location of the trash receptacle and bench on the southeastern quadrant of the study intersection. It is recommended that the trash receptacle and bench be relocated approximately 170 feet to the north.
- Periodically review the safety and operation of the study intersection with the City of Delray Beach and take action as appropriate to modify its traffic control and related features. The

reviews should be performed at six (6) month intervals initially, and their frequency adjusted as needed based on safety and operational trends.

APPENDIX H

Signal Warrant Calculations

TRAFFIC SIGNAL WARRANT SUMMARY

City: **Delray Beach (Weekday)**
 County: **93 – Palm Beach**
 District: **Four**

Engineer: **A&P**
 Date: **October 25, 2016**

Major Street: **SR 5/US-1/NE 6th Ave** Lanes: **3** Major Approach Speed: **35**
 Minor Street: **NE 1st Street** Lanes: **1** Minor Approach Speed: **35**

MUTCD Electronic Reference to Chapter 4: <http://mutcd.fhwa.dot.gov/pdfs/2009r1r2/part4.pdf>

Volume Level Criteria

1. Is the posted speed or 85th-percentile of major street > 40 mph (70 km/h)? Yes No
2. Is the intersection in a built-up area of an isolated community with a population < 10,000? Yes No

"70%" volume level **may** be used if Question 1 **or** 2 above is answered "Yes"

70% 100%

WARRANT 1 - EIGHT-HOUR VEHICULAR VOLUME

Warrant 1 is satisfied if Condition A or Condition B is "100%" satisfied for eight hours.

Warrant 1 is also satisfied if both Condition A and Condition B are "80%" satisfied (should only be applied after an adequate trial of other alternatives that could cause less delay and inconvenience to traffic has failed to solve the traffic problems).

Yes No

Yes No

Condition A - Minimum Vehicular Volume

Condition A is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a traffic control signal.

100% Satisfied: Yes No

80% Satisfied: Yes No

70% Satisfied: Yes No

Number of Lanes for moving traffic on each approach		Vehicles per hour on major-street (total of both approaches)			Vehicles per hour on minor-street (one direction only)		
Major	Minor	100% ^a	80% ^b	70% ^c	100% ^a	80% ^b	70% ^c
1	1	500	400	350	150	120	105

TRAFFIC SIGNAL WARRANT SUMMARY**Condition B - Interruption of Continuous Traffic**

Condition B is intended for application where Condition A is not satisfied and the traffic volume on a major street is so heavy that traffic on the minor intersecting street suffers excessive delay or conflict in entering or crossing the major street.
